... press F10 to enter the Boot Menu. ... then select the CD/DVD ROM Drive, and press 'c' to open a Windows Boot Menu. ... then select "Repair Your Computer". Press any key to continue. ... then select "Command Prompt". Type the following: C:\> bootrec /fixmbr ... then type reboot. But even then, i can access my data with the demo version of MC. Does any one know how to fix this? A: I think you have installed the wrong DVD. The DVD/DVD-RW you have is the one for Windows XP, not the one for Windows Vista. You have to burn the correct DVD for Windows Vista, then you can try and repair using that. You can also do the following: Put in the Windows Vista DVD and power on your computer. Go to Device Manager. Go to Universal Serial Bus Controllers. Look for the USB Controller corresponding to your drive. Look for errors in the red circle with a yellow arrow or a red arrow. If you found an error, restart the computer and try and install it again. Once

---

you have your drive working correctly, you can get into the Windows Vista DVD and repair using that. Then when you get to your Windows XP partition, you can use that one as well. If you have both drives working (Windows Vista and Windows XP), you can use these methods. Once you have your drives working, you can fix your Grub. I'm not sure how to do that for a dual boot, I haven't done it before. I think Grub is something you can configure on a boot drive, so you can make a bootable disk with the OS you want and then you can go in and configure Grub to make sure you have the right OS listed. Nearly four decades ago, a young man named Jeremy Salisbury left his home in England and moved to the United States with \$700 in his pocket. He landed in the Southwest — in El Paso, Texas — and hopped a bus to San Antonio, where he got a job working at the U.S. Navy's Strategic Communications Command. The mission was to listen in on whatever the Soviets were saying to each other.
